Overview of the Landslide Inventory of the Linnton Quadrangle, Multnomah and Washington Counties, Oregon

2011

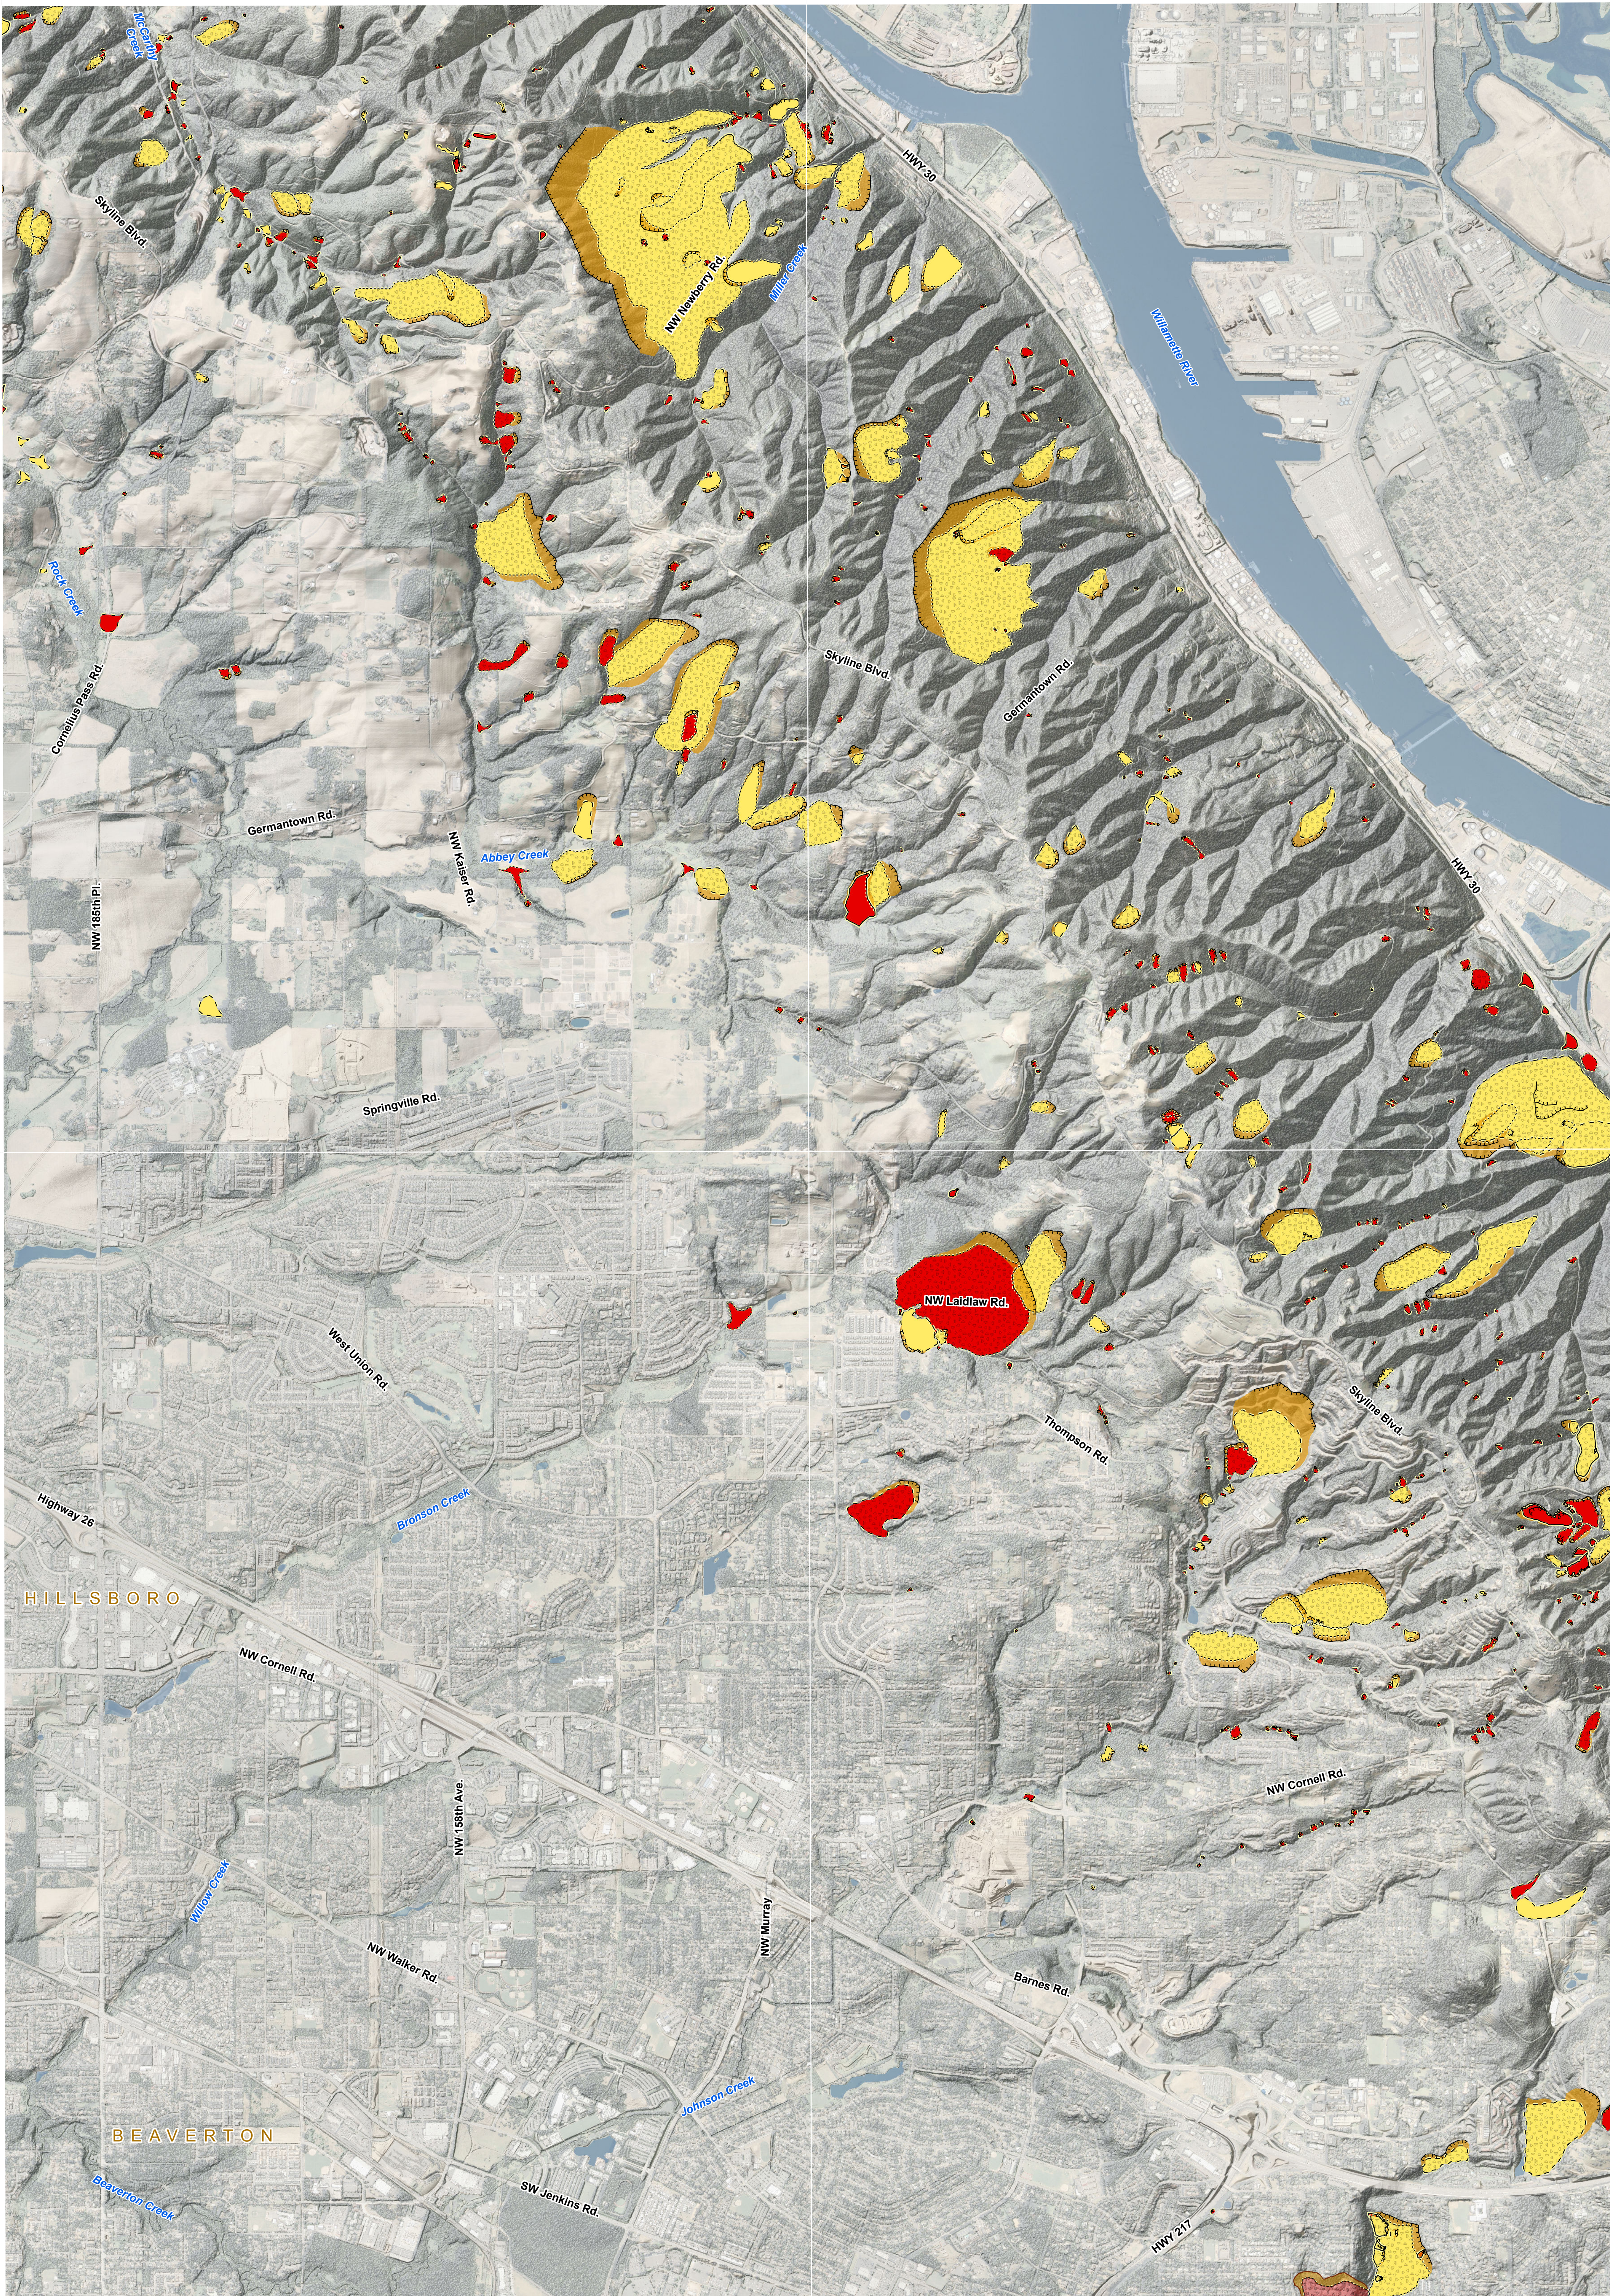

IMS-35

INTERPRETIVE MAP SERIES

Landslide Inventory Maps of the Linnton Quadrangle,
Multnomah and Washington Counties, Oregon

by William J. Burns, Ian P. Madin,
Katherine A. Mickelson, and Marina C. Drazba

PLATE 5

The purpose of this map is to aid the user in understanding the extent of this study and the landslides mapped within the full extent of the study. This overview map also serves as an index map for the four quarter-quadrangle plates included with this publication. These four plates include much more detail and are at the publication scale for the landslide data (1:8,000). Plate 1, northwest quarter; Plate 2, northeast quarter; and Plate 4, southeast quarter (see location map to the right). GIS data files containing landslide data shown on the plates are also included with this publication.

This map was prepared by following the *Protocol for Inventory Mapping of Landslide Deposits from Light Detection and Ranging (Lidar) Imagery* developed by Burns and Madin (2009). Each landslide shown on this map has been classified according to the activity of landsliding, landslide features, deep or shallow failure, and confidence of landslide interpretation. These landslide characteristics are determined primarily on the basis of geomorphic features, or landforms, observed for each landslide. The symbology used to display these characteristics is explained on plates 1-4.

Burns, W. J., and Madin, I. P., 2009. Landslide protocol for inventory mapping of landslide deposits from light detection and ranging (lidar) imagery. Oregon Department of Geology and Mineral Industries Special Paper 42, 30 p.

IMPORTANT NOTICE
This map depicts an inventory of existing landslides based on published and unpublished reports and interpretation of topography derived from lidar data and air photos. The inventory was created following the protocol defined by Burns and Madin (2009). This map cannot serve as a substitute for site-specific investigations by qualified practitioners. Site-specific data may give results that differ from those shown on this map.

Cartography by William J. Burns, Oregon Department of Geology and Mineral Industries.

SCALE 1:16,000

Base Map:

Lidar data from DOGAMI Lidar Data Quadrangle 45122E7-Linnton and the Puget Sound Lidar Consortium (2005). Digital elevation model (DEM) consists of a 3-foot square elevation grid that was converted into a hillshade image with sun angle at 315 degrees at a 60 degree angle from horizontal. The DEM is multiplied by 5 (vertical exaggeration) to enhance slope areas.

Orthophoto is from Oregon Geospatial Enterprise Office, 2005 and consists of 2005 orthophoto draped over DEM with transparency.

Projection: North American Datum 1983, UTM zone 10 north.

Software: Esri ArcMap 10.0.
