

# Central Pumice Cone and Lava Flows, Newberry Crater, Oregon

L I D A R      Revealing Oregon's Dynamic Landscape

Central Pumice Cone and associated lava flows separating Paulina Lake and East Lake in Newberry Crater of Deschutes County, Oregon. Newberry Volcano is one of Oregon's largest and most active volcanoes. These cinder cones and lava flows that sit between the two lakes in the volcano's caldera formed about 7,300 years ago. This 3D enhanced image was created using a combination of lidar-derived shaded relief and aerial orthophotography.  
2010 Oregon Department of Geology and Mineral Industries Lidar imagery and graphic design by Daniel Coe
