

TSUNAMI!

HOW TO SURVIVE A TSUNAMI

Undersea earthquakes can produce tsunamis that can strike the coast quickly and with little warning.

If you are in a low-lying area along the coast and feel an earthquake:

1

**Drop, cover and hold
during the earthquake.**

2

**Move inland and uphill
quickly, or use a local
evacuation route.**

3

**Wait for official all clear
before returning to low
lying areas.**
