MICROPALAEONTOLOGICAL STUDY
OF
FOUR DEEP WELLS
IN COOS COUNTY, OREGON

by

Daniel R. McKee1
Consulting Micropaleontologist

Partial funding for this project was provided by
the Oregon Outer Continental Shelf grant
under Section 305 of the Coastal Zone Management Act,
administered by the Office of Coastal Zone Management, NOAA,
and the Oregon Department of Land Conservation and Development

1979

MICROPALEONTOLOGICAL STUDY OF FOUR DEEP WELLS
IN COOS COUNTY, OREGON

by Daniel R. McKeel

The Department of Geology and Mineral Industries contracted Daniel McKeel, Consulting Micropaleontologist, to work samples from four deep oil and gas test holes in southwestern Oregon. Geologic ages have been assigned by Mr. McKeel to rock units penetrated in the wells. This work was done as support for a study by the Department to evaluate oil and gas potential of the Coos Basin and the adjacent continental shelf. The Department initiated this investigation in the spring of 1978. Results of the paleontologic work will be useful for future geologic investigations of southwestern Oregon.

Of the four wells selected for paleontologic study, two were drilled onshore and two offshore. E.M. Warren "Coos County #1-7" and Phillips Petroleum Co. "Dobbyns #1" were drilled in the central Coos Basin. The Pan American Petroleum "OCS-P112 #1" was drilled 10 miles off the coast from Bandon, and Union Oil Co. "OCS-P130 #1" was drilled 35 miles off the coast from Florence.

The Department published paleontologic studies by Weldon Rau of two deep wells in 1973 under its Oil and Gas Investigation series. E.M. Warren's well was first worked by Rau in 1973 and redone in the current studies since the section described as upper Eocene was much thicker than surface mapping indicated. Daniel McKeel concluded that the bottom 1000 feet of the Warren samples is barren of microfossils so the age of samples in the Warren well below a depth of 5710 feet is indeterminate.

E. M. WARREN "COOS COUNTY #1-7"
SE $\frac{1}{4}$ sec. 7, T. 27 S., R. 13 W.
COOS COUNTY, OREGON

This study was undertaken to determine how deep indigenous Narizian foraminiferal faunas extend in the well, and if the well possibly penetrated older than Narizian horizons.

The deepest indigenous Narizian fauna, in the opinion of this author occurs at about 5710 feet. The interval from 5710 feet to 6340 feet (T.D.) is interpreted to be probably barren of indigenous Foraminifera; therefore the age of this part of the section is indeterminate.

The possibility of repeated section in the well was suggested to this author by Dick Robertson, Northwest Exploration Company, Denver. An examination of Rau's (1973) preliminary checklist with this in mind, plus re-examination of approximately 40 samples throughout the well, did indicate a possible repeated section in the lower half. However, a detailed quantitative study of consecutive samples (both float and tailings) would be necessary to confirm this possibility. A project of this nature would exceed the budgeted funds for the present study.

Below are species lists for eleven selected samples near the bottom of the well.

5200' Amphimorphina jenkinsi (juvenile) VR*, Arenaceous indeterminate VR, Bolivina basisenta VR, Bulimina schencki C, Cribranion cf. roemerri (juv.) R, Gyroidina simiensis C, Haplophragmoides sp. (small, crushed) VR, Lenticulina spp. R, Nonionella? sp. VR, Ostracods VR.

5680' Amphimorphina jenkinsi VR, Bolivina basisenta VR, Bolivina kleinelli? VR, Bulimina schencki C, Gastropods VR, Globobulimina sp. VR, Gyroidina condoni R, Gyroidina simiensis C, Haplophragmoides sp. (small, crushed) R, Ostracods VR.

5710' Bulimina schencki R, Cribranion cf. roemerri VR, Eponides yeguaensis VR, Gyroidina condoni? (broken) VR, Gyroidina simiensis C, Lenticulina sp. VR, Nonion/Nonionella sp. R, Quinqueloculina spp. R, Spumellaria VR.

5770' Bolivina basisenta VR, Bulimina schencki R, Diatoms (pyritized) VR, Gyroidina simiensis R. Probably barren of indigenous Foraminifera.

5830' Arenaceous indeterminate VR, Bolivina sp. VR, Bulimina schencki VR, Eponides yeguaensis VR, Lenticulina spp. R, Plectofrondicularia searsi VR. Probably barren of indigenous Foraminifera.

*VR = 1-2 specimens; R = 2-10; C = 11-32.

(E. M. WARREN COOS COUNTY #1-7)

5890' Amphimorphina jenkinsi VR, Arenaceous indeterminate VR, Bathysiphon sp. (small, thin) VR, Cibicides sp. (small) VR, Diatoms (pyritized) R, Gyroidina condoni R, Gyroidina simiensis R, Nonion sp. VR, Ostracods VR. Probably barren of indigenous Foraminifera.

5980' Bulimina schencki VR, Cassidulina globosa VR, Globobulimina sp. VR, Gyroidina simiensis VR, Lenticulina spp. R, Spumellaria VR. Barren of indigenous Foraminifera.

6070' Bathysiphon? sp. VR, Bulimina schencki VR, Cassidulina globosa VR, Gyroidina simiensis R. Barren of indigenous Foraminifera.

6160' Arenaceous indeterminate (very small) VR, Bulimina schencki VR, Spumellaria VR. Barren of indigenous Foraminifera.

6280' Arenaceous indeterminate VR. Barren of indigenous Foraminifera.

6340' Plectofrondicularia vokesi (of Mallory, 1959) VR. Barren of indigenous Foraminifera.

COOS COUNTY, OREGON

The following foraminiferal report lists interpretations of 50 ditch sample residues within the interval from 50 to 6938 feet. Processed samples were borrowed from the Oregon Department of Geology and Mineral Industries in Portland.

There are essentially two fossiliferous intervals in the well. The higher one, from 1800 to 2330 feet, presents a problem. It contains a cold water, nearshore benthonic foraminiferal fauna. Some of the species present are incompatible with regard to both age and paleobathymetry. Abundant specimens of the bathyal genus Gyroidina occur with rare inner neritic Elphidium californicum. E. californicum and Gyroidina guayabalenensis, considered restricted to Ulatisan sediments or older in California (Mallory, 1959), occur with common Cribronion cf. roemerri, which is believed to be restricted to the Refugian in the Gulf of Alaska (R. S. Boettcher, personal communication). Hence the present author's interpretation of Narizian, Coaledo Formation for this interval (1800 to 2330 feet) is probable at best. Since the benthonic fauna in this interval represents cold bottom water (very low species diversity), an outer neritic environment is suggested here; the deep water species of Gyroidina could have migrated onto the outer shelf, finding similar temperatures to their normal bathyal habitat.

The lower fossiliferous interval, from 5040 to 6410 feet, contains an offshore open marine fauna, consisting almost entirely of diminutive planktonic foraminifers and radiolarians. However, a few mature identifiable specimens of planktonic Foraminifera are known in southwestern Oregon only from the Roseburg Formation (see Miles, 1977). These fossils, plus the predominantly volcanic lithology from 2340 feet to total depth, indicate that the bottom two-thirds of the well is in the lower member of the Roseburg. Indigenous fossils were not seen in the upper and lower parts of the volcanic interval (from 2340 to 5030, and 6420 to 6938 feet), but interbeds of shale yielded faunas from 5040 to 6410 feet, thus documenting the submarine nature and lower Paleogene age of the basalts (see also Baldwin, 1973, p. 18). The fossiliferous interval (5040 to 6410 feet) could not be assigned directly to California benthonic Stages, due to the extreme rarity of diagnostic benthonic Foraminifera. The interval from 5400 to 6230 feet is probably Bulitian to Penutian in age, and the sample from 6240 to 6290 feet is possibly Ynezian to Bulitian.

Appendices include a key to abbreviated genera, and species lists for each sample examined.

PAN AMERICAN PETROLEUM "OCS - P0112 #1"
 Lat. 43.24603, Long. 124.59268
 OFFSHORE BANDON, OREGON

The following foraminiferal report lists interpretations of 33 (28 ditch and five sidewall cores) sample residues within the interval from 950 to 6140 feet. The samples were processed by Pan American Petroleum Corporation (now AMOCO Production Company).

The interval examined represents all or part of the Saucesian, Zemorrian, Refugian, Narizian, Ulatisian, and Penutian California benthonic foraminiferal Stages (Lower Miocene to Lower Eocene) of Kleinpell (1938), Schenck and Kleinpell (1936), and Mallory (1959). Traditionally, West Coast workers have considered the Refugian, Narizian, and Ulatisian Stages to be Oligocene, Upper Eocene, and Middle Eocene in age, respectively. Recent work, however, suggests that: (1) the Lower Refugian is Upper Eocene (Tipton, 1975); (2) the Lower Narizian is Middle Eocene (Poore and Brabb, 1977); and (3) the Lower Ulatisian is Lower Eocene (Berggren and Van Couvering, 1973). To avoid confusion, the report below correlates the California benthonic foraminiferal Stages (as recognized in the OCS - P0112 #1) with the Oregon coastal Formations (see McKeel and Lipps, 1975, Rau, 1975, Thoms, 1975, and Tipton, 1975).

Appendices include a key to abbreviated genera, and species lists with paleobathymetric interpretations for each sample.

Hiatus - Tunnel Point Sandstone and uppermost Bastendorff Formation missing.		

(PAN AM OCS - P0112 #1)

<u>DEPTH (FEET)</u>	<u>STAGE</u>	<u>FORMATION</u>
2960 - 2990	Lower Refugian	Upper Bastendorff
3020 - 3050	Lower Refugian	Upper Bastendorff
3290 - 3320	Lower Refugian	Upper Bastendorff
3500 - 3530	Lower Refugian	Upper Bastendorff
3740 - 3770	Narizian	U. Coaledo or L. Bast.
3890 - 3920	Lower Narizian	Lower to Middle Coaledo
3918 SWC	Lower Narizian	Lower to Middle Coaledo
4220 - 4250	Lower Narizian	Lower to Middle Coaledo
4490 SWC	Upper Ulatisian	Flournoy
4550 - 4580	Upper Ulatisian	Flournoy
Unconformity -	Lower Ulatisian not represented (see Miles, 1977).	
4610 SWC	Penutian	Roseburg/Lookingglass
4610 - 4640	Penutian	Roseburg/Lookingglass
4850 - 4880	Penutian	Roseburg/Lookingglass
4852 SWC	Penutian	Roseburg/Lookingglass
Possible unconformity.		
5030 - 5060	Possible Cretaceous	Possible Hunters Cove
5060 - 5090	Possible Cretaceous	Possible Hunters Cove
5210 - 5240	Indeterminate	Indeterminate
5510 - 5540	Indeterminate	Indeterminate
5810 - 5840	Indeterminate	Indeterminate
6110 - 6140	Indeterminate	Indeterminate
6131 SWC	Indeterminate	Indeterminate

APPENDIX A

All foraminiferal genera mentioned in Appendix B are abbreviated as follows:

AC	Acarinina	BLMA	Buliminella	CY	Cyclammina
ALA	Alabamina	BLV	Bolivina	DN	Dentalina
AMD	Ammodiscus	BT	Bathysiphon	DRT	"Dorothia"
AMPS	Amphistegina	CB	Cibicides	DSCR	"Discorbis"
AMPM	Amphimorphina	CBD	Cibicidoides	EG	Eggerella
ANO	Anomalina	CL	Clavulina	EL	Elphidium
AS	Asterigerina	CN	Cancris	ELA	Elphidiella
BC	Buccella	CS	Cassidulina	EPN	Eponides
BF	Bifarina	CSD	Cassidulinoides	EPS	Epistomina
BLM	Bulimina	CT	Catapsydrax	EPSL	Epistominella

(PAN AM OCS - P0112 #1)

FS	<i>Fissurina</i>	NDG	<i>Nodogenerina</i>	SL	<i>Silicosigmoilina</i>
GBB	<i>Globobulimina</i>	NDS	<i>Nodosaria</i>	SPD	<i>Sphaeroidina</i>
GDL	<i>Glandulina</i>	NN	<i>Nonion</i>	SPN	<i>Siphonina</i>
GL	<i>Globigerina</i>	NNA	<i>Nonionella</i>	SPR	<i>Spirillina</i>
GLQ	<i>Globoquadrina</i>	PGD	<i>Pseudoglandulina</i>	SR	<i>Saracenaria</i>
CLR	<i>Globorotalia</i>	PLF	<i>Plectofrondicularia</i>	TRCR	<i>Truncorotaloides</i>
GLTH	<i>Globigerinatheka</i>	PLL	<i>Pullenia</i>	TRF	<i>Trifarina</i>
GM	<i>Glomospira</i>	PLR	<i>Planorotalites</i>	TRT	<i>Tritaxilina</i>
GY	<i>Gyroidina</i>	PRG	<i>Pyrgo</i>	TX	<i>Textularia</i>
HP	<i>Haplophragmoides</i>	PSH	<i>Pseudohastigerina</i>	U	<i>Uvigerina</i>
KR	<i>Karreriella</i>	QN	<i>Quinqueloculina</i>	UA	<i>Uvigerinella</i>
LNT	<i>Lenticulina</i>	RT	<i>Rotalia</i>	VAL	<i>Valvulineria</i>
MRZ	<i>Morozovella</i>	SBT	<i>Subbotina</i>	VRG	<i>Virgulina</i>

APPENDIX B

Below are foraminiferal species lists and paleobathymetric interpretations for each sample.

1010 - 1040' BC* cf. *frigida* VR**, BLM cf. *ovata* VR, CS *crassipunctata* C, GL cf. *praibulloides* VR, PLF *miocenica* R, UA cf. *obesa impolita* R, VAL *menloensis* VR. Upper Bathyal.

UNION OIL COMPANY "OCS - P0130 FULMAR #1"
Lat. 44.05987, Long. 124.64711
OFFSHORE FLORENCE, OREGON

The following foraminiferal report contains interpretations of 26 (21 ditch and five sidewall cores) samples within the interval from 760 to 12,285 feet. The samples examined were previously processed for paleontology by Union Oil Company.

The interval examined contains faunas which represent all or part of the Venturian(?), Repettian, Mohnian, Luisian, Saucesian, Zemorrian, Narizian, Penutian, and Bulitian California benthonic foraminiferal Stages of Natland (1952), Kleinpell (1938), Schenck and Kleinpell (1936), and Mallory (1959).

Several Paleogene age interpretations in this report are tentative, due to mixed faunas. For example, the sample at 4540 feet contains both Middle and Lower Eocene species; the younger assemblage is considered indigenous because the sample at 4720 feet contains no specimens older than Middle Eocene. The samples at 5000, 5041, 5370, and 5400 feet all contain mixed faunas. In each of these cases, the author has interpreted the older fauna to be indigenous. It is believed that these samples represent a relatively slow rate of sedimentation far from shore.

A single Cretaceous foraminifer was found at 5400 feet. Although well-preserved, the possibility that this specimen is reworked requires that the Cretaceous age call at 5400 feet be very tentative.

The age interpretations in the "SERIES" column of this report in some cases differ from the original published provincial age assignments of the California benthonic foraminiferal stages. The reason for these discrepancies primarily is that recent research with planktonic microfossils is taken into account here. For example, the Lower Mohnian Stage is now considered to be Middle Miocene in age (A.D. Warren, personal communication). Originally, Kleinpell (1938) assigned his Mohnian Stage to the Upper Miocene. In these cases, both the Oregon age interpretation by this author and the original California provincial age are listed.

Appendices include a key to abbreviated genera, and species lists with paleobathymetric interpretations for each sample studied.

FORAMINIFERAL REPORT

<u>DEPTH (FEET)</u>	<u>CALIFORNIA STAGE EQUIVALENT</u>	<u>SERIES</u>
760	Venturian? (Provincial Middle Pliocene)	Prob. Upper Pliocene
1340SWC	Repettian? (Provincial Lower Pliocene)	Pliocene
